Hochland is a family-owned company headquartered in Germany. Today, Hochland employs more than 4,000 people across 12 factories in 8 European countries. Hochland cheese is sold in over 30 countries and is synonymous with quality and continuous innovation.

Hochland products entered the Russian market in 1994, initially imported from Germany. In 2000, Hochland began production in Russia using leased facilities. In 2003, the company commissioned its own factory for processed cheese production in the Ramenskoye district of the Moscow region, and in 2011 acquired another factory in the Belgorod region for the production of cottage cheese.

By the fall of 2013, it became clear that the growing business demands required the implementation of an efficient warehouse management system. TeamIdea was selected as the integrator for the project to implement the SAP SCM EWM system.

The project was executed at a high level, which led us to continue our collaboration with TeamIdea for the support of the SAP SCM EWM system. We believe that TeamIdea's round-the-clock support service deserves high praise. Thanks to their professional consultants, we are confident in the functionality of our system 24/7. Through a dedicated support hotline, our colleagues receive prompt consultations on any incidents that arise.

We especially value the registration and management of requests in SAP Solution Manager, which allows us to obtain statistics on typical requests and maintain a consolidated knowledge base with the help of our partner TeamIdea's support consultants.

We thank the TeamIdea team for many years of productive collaboration and look forward to new joint projects.
